

BAKER RIVER PROJECT RELICENSE Public Information Meeting

April 26, 2000

9:30 a.m. - 12:00 p.m. Cottontree Inn 2401 Riverside Drive Mount Vernon, WA 6:00 p.m. - 8:30 p.m. Concrete High School 7830 Superior Avenue Concrete, WA

AGENDA

Registration	
Welcome & Review of March 30, 2000 Meeting	Connie Freeland - Licensing Program Manager
The Alternative Licensing Procedures - Additional Information	Connie Freeland
Establishing Working Groups by Resource Areas	Connie Freeland
Breakout Session - Interests Identification	Cary Feldmann - Manager: Environmental Strategies
Reconvene/Group Discussion	Cary Feldmann
Questions & Answers	

April 12, 2000

Dear Interested Party:

On March 30, 2000, Puget Sound Energy (PSE) held two public meetings to initiate the federal relicensing of the Baker River Hydroelectric Project. These meetings presented information on the hydroelectric project, explained the relicensing processes, and discussed how the public can participate in relicensing. Those meetings were attended by 74 people representing the public, local jurisdictions, and resource agencies. If you attended one of these meetings, we hope you found the presentations informative.

As a follow-up to these initial meetings, PSE is holding two more public meetings on April 26, 2000. Both meetings will:

- Provide additional information on the relicensing processes
- Discuss formation of working groups focused on resource areas (fisheries/aquatic, wildlife/terrestrial, cultural/historical, hydrology/water, recreation, and economics/operations)
- Gather interests of the participants related to these resource areas

We look forward to your participation in one of these meetings as we lay the foundation for the relicensing of the Baker Project.

The meetings will be held on April 26 at:

10:00 a.m. to noon

OR

6:30 p.m. to 8:30 p.m.

Cottontree Inn 2401 Riverside Dr Concrete High School 7830 Superior Ave

Mount Vernon, WA

Concrete, WA

Coffee and sign-in: 9:30 a.m.

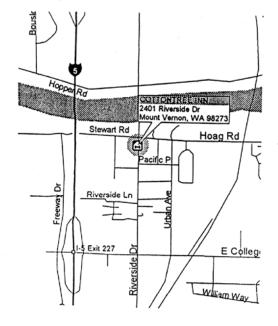

Coffee and sign-in: 6:00 p.m.

Maps and driving directions to both meeting sites are enclosed.

If you have any questions or require additional information, please call the message line for the Baker River Project Relicense at 1-888-CALL PSE, extension 81-3110, or send an email message to bakerlicense@puget.com. A member of the relicensing team will respond to your call or message.

Sincerely,

Edward R. Schild, Director Energy Production and Storage

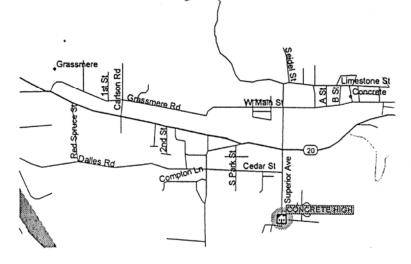

COTTONTREE INN:

March 30, 2000 10:00 am - 12:00 pm Registration 9:30am

From Northbound or Sounthbound I-5, take Exit 227. Off the Exit, go East on College Way. Turn Left on Riverside Dr. Inn is located near corner of Stewart and Riverside Dr.

Address: 2401 Riverside Dr Phone: 360-428-5678

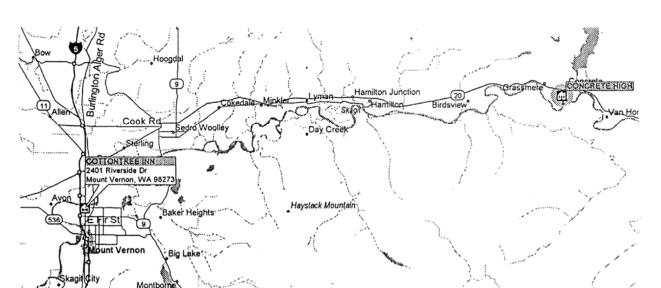

CONRETE HIGH SCHOOL:

March 30, 2000 6:30pm - 8:30pm Registration: 6:00pm

From Northbound or Southbound I-5 Go East on Highway 20, to City of Concrete. Turn Right on Superior Ave.

Address: 7830 Superior Ave Phone: 360-853-8143

CONTACT INFORMATION

Puget Sound Energy has established several methods for interested parties to contact the relicensing team or become involved with the Baker River Project Relicense. If you have a question, comment, request, or would like more information on the relicense, please use any of the following contact methods.

MAILING ADDRESS

Baker River Project Relicense Puget Sound Energy, Inc. PO Box 97034 OBC-14N Bellevue, WA 98009-9734

WORKING GROUP MEETINGS

WORKING GROUP	TEAM LEADER	DATE & TIME*
Fisheries & Aquatic Resources	Arnie Aspelund	May 18: 3:00 p.m 5:00 p.m.
Wildlife & Terrestrial Resources	Tony Fuchs	May 23: 10:00 a.m 12:00 p.m.
Cultural & Historical Resources	Connie Freeland	May 25: 3:00 p.m 5:00 p.m.
Recreational Resources	Chris Drechsel	May 23: 3:00 p.m 5:00 p.m.
Hydrological & Water Resources	Bob Barnes	May 18: 10:00 a.m 12:00 p.m.
Economics/Operations	Charles Morton	May 16: 10:00 a.m 12:00 p.m.

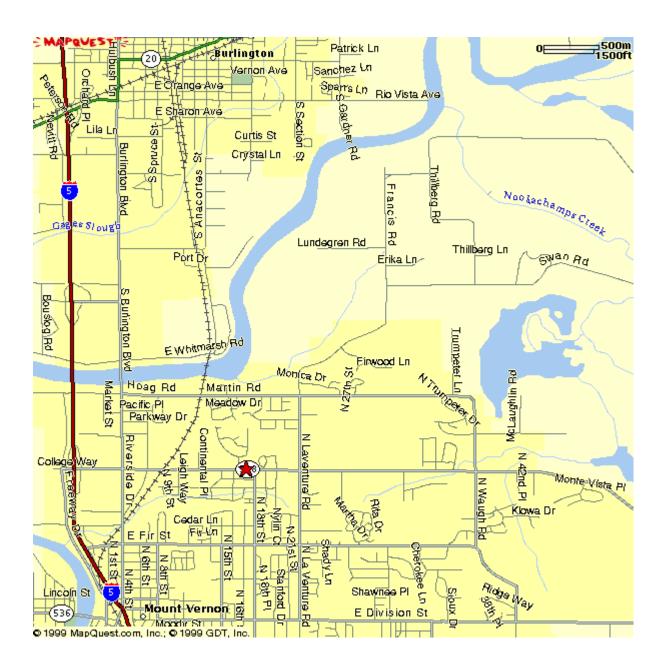

^{*} All of these first working group meetings will be held at Puget Sound Energy's Mount Vernon Business office (map and address attached).

OBJECTIVES OF FIRST WORKING GROUP MEETINGS

1. Set group mission statement in support of Baker Solution Team mission statement:

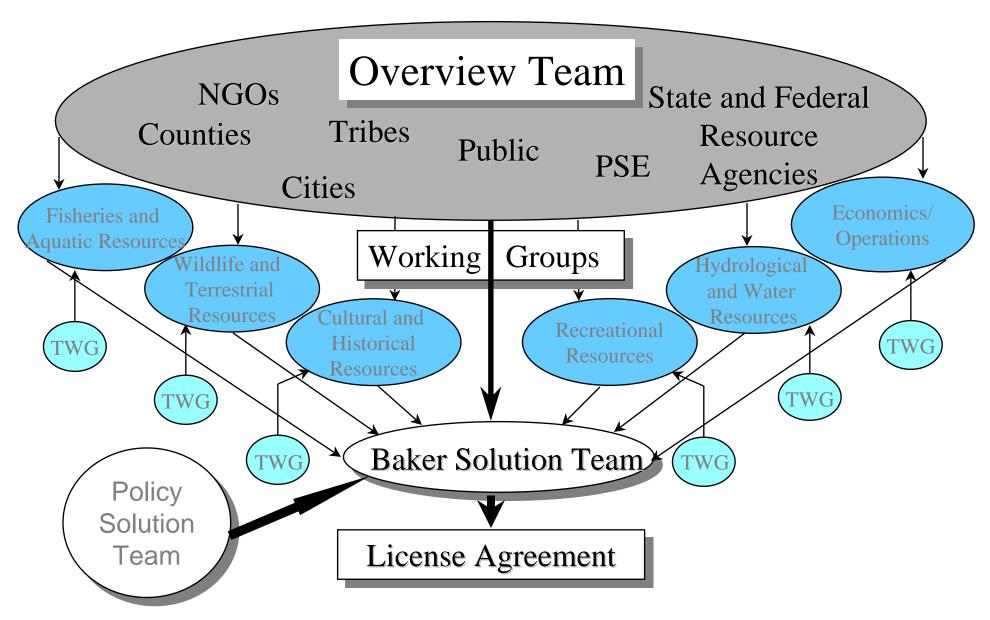

"To craft a license application for the Baker River Project that is cost-effective and consistent with public interests."

- 2. Set working group social and logistical norms.
- 3. Identify others who should participate in the group.
- 4. Set agenda for next meeting.

Baker River Project Relicense

Process Structure

Team Norm Examples

Meeting Norms (commonly-defined team operating rules):

- 1. When do team meetings start/end?
- 2. Do they always start/end on time? Under what conditions would exceptions be made?
- 3. How are team decisions made? (by consensus, compromise, democratic vote, etc.)
- 4. How many members must be present (quorum) in order for the team to meet?
- 5. Whom do members notify if something unavoidable comes up and they realize that they will be unable to make the meeting?
- 6. Are recorder, team leader, and back-up team leader roles rotated? If so, how?
- 7. When are meeting minutes and agendas distributed?
- 8. How does the team evaluate the effectiveness of its meetings?

Social Norms (commonly-defined rules for how team members will treat each other):

- 1. Listen to each other.
- 2. Celebrate diverse opinions.
- 3. Keep an open mind.
- 4. Be honest and kind at the same time.
- 5. Seek first to understand, then to be understood.
- 6. Have fun.
- 7. Don't interrupt each other.
- 8. Celebrate (even small) accomplishments.

List of Interests/Issues from April 26th Public Information Meeting

Improved public education, outreach, & interpretation

Improve & create back country trails - system of trails - loop systems

More trails in more developed areas

Use Concrete, WA as a focal point for trail access

Create water trail system

Develop scenic/aesthetic management objectives and management strategies to meet the objectives

Improve the identification of all recreational opportunities (basin wide)

Develop education & interpretive plan to include specific resource area information. Develop ways to implement & sustain the plan

Leverage existing resources for education

Develop public communication system

Identification of private lands around reservoir

Provide access to Lake Shannon

Low level hiking opportunity

Improve access to rock climbing areas in order to improve safety

Improve recreational fishing opportunities

Viewing of spawning fish

Possible relocation and/or expansion of existing interpretive facilities

Cultural & Historical Working Group

Showcase up-river history

Explore potential for cultural landscapes in area

Ensure compliance with federal laws on resource management

Explore full range of mitigation measures, such as enhancement of particular resources

Explore cooperative projects with other interest groups (tribes, museum groups,...)

Pursue ways to make Baker River a destination

Explore interpretive options (education, interpretation, outreach)

Coordinate information dispersal

Develop exhibits to show history of area - past, present, future

Research more about local heritage (including oral history interviews)

Encourage tribal participation (government to government)- network with tribes (one-on-one)

Survey archaeological sites in reservoir drawdown areas & shorelines

Develop mitigation & management plan for sites

Consider effect & management of resources in areal context

Consider local values in setting priorities

Research & priorities should address both "local" and tribal prehistory, history & current

Fisheries & Aquatic Resources Working Group

Appropriate representation by fish management authority/Federal, State, Tribes, (PFMC), Local Govts, NGO's

Meet Aquatic Conservation Strategy of National Forest Plan. Biodiversity - emphasis on native species.

Direct/indirect effects on Skagit Wild Scenic River – fish, wildlife, recreation, aesthetics, etc

Improve downstream, upstream and reservoir fish passage at project

Sustainable levels of anadromous fish stocks to historical levels. Increasing sockeye production potential (fertilization)

Increase/maintain recreational access on reservoirs

Improve fish passage & production facilities/operations to meet current/future fish management objectives

Quantifying project impacts related to flow/habitat/fish downstream of Project including Baker River and area of project influence on Skagit River. (Flow coordination - IFIM –from dam to confluence & beyond

Quantifying project impacts to state owned Aquatic Land (past/present/future)

Education/Interpretation/outreach

Restoration Resident Fish species

Having clean water (Baker River discharge) - Municipal cooperation on City of Concrete sewage treatment plant -Flow coordination

-Flow control

Sustained economic benefits for city of Concrete-as they relate to fisheries

In concert with sockeye, bring back other anadromous fish species using projects such as

Little Baker River Channel Project

Operations & Economics Working Group

Warning system (community)

An assessment of structural integrity of various facilities Upper Baker/Lower Baker/fitted/West Pass Dike

Project viability

Economics of Project

4 (e) conditions & ability to fund

Economics of operations of the project & how we compare those to the non-commodity tradeoffs (e.g., aethetics, preservation of historic buildings)

Army Corp. involvement

Commercial timberland management & how it fits with PSE operations & other uses of resources

Develop a process for evaluation of economic impact of various options

Over 50 year license, things will change. How will we be able to assess and address future issues

Ownership identification of properties in Baker Basin

Taxes for Upper Baker go to Whatcom County; however, all support svcs for this portion of project come from Skagit County & Concrete

Explore ways to "lure" drive-through traffic from Highway 20, thus providing enhanced economic vitality of the immediate area

Exploration of ecotourism and/or other potential economic uses of project area

Wildlife & Terrestrial Resources Working Group

Noxious Weeds - characterize problem

Loss of rare plant habitat

Wetland, riparian rare habitats

Inundation habitat loss - wetlands, riparian, deer & elk winter range

Fluctuating water levels - s&m species & precluding loon and other waterfowl nesting

LSR impacts - # of species that can be supported, connectivity edge effect on HS for species (Habitat Suitability)

Recreation impacts - Grizzly bear, mountain goat, other

Productivity - reduced species compliment & biomass of migratory fish

Potential recreational impacts to rare plants, habitats & species

Potential impacts to DNR managed trust lands - HCP

Public Environmental Education & Outreach - Terr issues

Designate areas for specific uses - eg: keep beaver areas for beavers and low impact human use

bats & other spp of concern which may be enhanced by project activities

ecotourism as means of enhancing wildlife - management of rec/users for enhancement of wildlife (ie. Visitor trail, walkways, interp signs)

Promotion of biodiversity - including those other than fish & mammals, ie plants, invertebrates, microb)

Hydrological & Water Resources Working Group

Flow coordination with upstream mainstem projects on the Skagit River (Ross, Gorge, Diablo). Stated concern is the protection of fisheries and/or other water related values.

Flow coordination with downstream water management on the main stem of the Skagit River such as IRPP on mainstem of the Skagit River

Degree of Project Impact to mainstem of Skagit River downstream of the Baker River confluence to Sedro Woolley (WDOE) or to delta

401 Water Quality Certification. Scoping, studies, requirements.

Slope stability and erosion control at Lake Shannon especially along steeper hill slopes.

Erosion control along shoreline at Upper Baker and depositional impacts in lower stream reaches due to loss of hydraulic gradient from reservoir backwater.

Flood control impacts and opportunities

Dams interrupt downstream transport of large organic debris

Flow maintenance for benefiting other downstream water uses and users

Potential meeting conflicts with other existing processes (USFS watershed analysis, WRIA 2514 & 2496 for example)

Water quality and flow issues regarding the city's sewage treatment plant discharge into the Baker River.

Management of hydro for protection and/or use of cultural and natural resources.

Snow chemistry and air pollution impacts to water quality. Do these processes lead to effects that should be considered in reservoir management and operation?

Upland [watershed] management influences water quality [quantity?]. Explore potential use of upland [watershed] management for desynchronizing storm flow to assist in flood control.

Glacial studies e.g. mass balances and chemistry affect both water quality and quantity. How are these effects accounted for in project operations from both water quality & quantity perspectives?

Public Information Meeting

April 26, 2000

9:30 a.m. - 12:00 p.m. Cottontree Inn 2401 Riverside Drive Mount Vernon, WA 6:00 p.m. - 8:30 p.m. Concrete High School 7830 Superior Avenue Concrete, WA

Meeting Summary

Puget Sound Energy held another two public meetings to initiate the federal relicensing of the Baker River Hydroelectric Project. The purposes of the meetings were to: review key points on the relicensing process and public involvement presented at the earlier meetings, provide additional information on the alternative licensing procedures, discuss setting up working groups by resource areas, and gather in working groups to brainstorm interests of participants. The presentation on the alternative procedures focused on the collaborative nature of the procedures and the requirements for requesting FERC permission to use the procedures, including gaining consensus of stakeholders and preparing a communications protocol for how the licensee, stakeholders and FERC will communicate until the license application is filed in 2004. Information was also provided on the communication tools for the relicense: the internet website, phone message line and email address.

Information was presented on the organization and initial meetings of the six working groups: fisheries and aquatic resources, wildlife and terrestrial resources, cultural and historical resources, recreational resources, hydrological and water resources, and economics/operations. At the breakout session, meeting participants moved around the room to the working group stations and listed their interests and issues regarding the various resources. The group then reconvened to summarize the points listed.

The next steps for the relicensing process include holding initial meetings of each of the working groups, to set up the procedures they will work by and identify additional participants for the groups. A process working group will also convene to draft the communications protocol. Results of these working groups will be presented at the next public meeting to be held in July.

May 3, 2000

Dear Interested Party:

RE: Baker River Project Relicense

On April 26, 2000, Puget Sound Energy (PSE) held its second set of public meetings to initiate the federal relicensing of the Baker River Hydroelectric Project. These meetings reviewed key points about the Federal Energy Regulatory Commission (FERC) relicensing process and how the public can become involved. Additional information was provided on the alternative licensing procedures and the setting up of working groups by resource areas. Forty people representing the public, local jurisdictions, and resource agencies attended these meetings held in Mount Vernon and Concrete.

This letter is a follow-up to the April 26 meetings and provides details on how you can contact PSE and information on the first working group meetings.

Contact Information:

Attached is information on four methods of contacting PSE or receiving information about the Baker River Project Relicense. These include our mailing address, telephone message line, email address and website address. If you do not want to continue receiving mailings about the Baker Relicense, please let us know, and we will remove your name from the mailing list.

Resource Working Groups:

Working groups will be where the substantive work for the resource areas will occur. Because these groups will be meeting for two to three years, it is important that they be carefully set up. We have scheduled the first working group meetings for the month of May. These initial 2-hour meetings will focus on process: how the group will work together and who should be part of the group. We anticipate several more process meetings for each working group before substantive work begins.

The schedule for these meetings and the location map are attached. We realize that the dates for the first meetings may not work for everyone interested in attending the working groups. Each group will work on a process to find the most convenient time for subsequent meetings. Please let us know if you plan to attend one of these working group meetings by using our message line or email address. If you cannot attend this first meeting, please contact us and the team leader for the working group you are interested in will contact you about your concerns and availability to attend future meetings.

Process Working Group:

PSE must request FERC's permission to use the alternative licensing procedures for the Baker Relicense. Part of that request is providing a communications protocol for how the licensee, stakeholders and FERC will interact until the license application is filed in 2004. PSE plans to convene a Process Working Group (to meet for 3 months, May through July) to draft this protocol. If you are interested in joining this working group, please use our message line or email address, and I will contact you with details.

Results of these working groups will be presented at the next public meeting to be held in July. Details of the meeting will be available on our website in June. If you have any questions or require additional information, please use our message line or email address, and a member of the relicensing team will respond to your call or message.

Sincerely,

Connie Freeland, Program Manager Baker River Project Relicense

WORKING GROUP MEETINGS

WORKING GROUP	TEAM LEADER	DATE & TIME*
Fisheries & Aquatic Resources	Arnie Aspelund	May 18: 3:00 p.m 5:00 p.m.
Wildlife & Terrestrial Resources	Tony Fuchs	May 23: 10:00 a.m 12:00 p.m.
Cultural & Historical Resources	Connie Freeland	May 25: 3:00 p.m 5:00 p.m.
Recreational Resources	Chris Drechsel	May 23: 3:00 p.m 5:00 p.m.
Hydrological & Water Resources	Bob Barnes	May 18: 10:00 a.m 12:00 p.m.
Economics/Operations	Charles Morton	May 16: 10:00 a.m 12:00 p.m.

^{*} All of these first working group meetings will be held at Puget Sound Energy's Mount Vernon Business office (map and address attached).

OBJECTIVES OF FIRST WORKING GROUP MEETINGS

1. Set group mission statement in support of Baker Solution Team mission statement:

"To craft a license application for the Baker River Project that is cost-effective and consistent with public interests."

- 2. Set working group social and logistical norms.
- 3. Identify others who should participate in the group.
- 4. Set agenda for next meeting.
